

# Data Fabric Studio (DFS)

Accelerate your journey from raw data to real business value.

Simplify processes and increase productivity along the end-to-end data lifecycle.

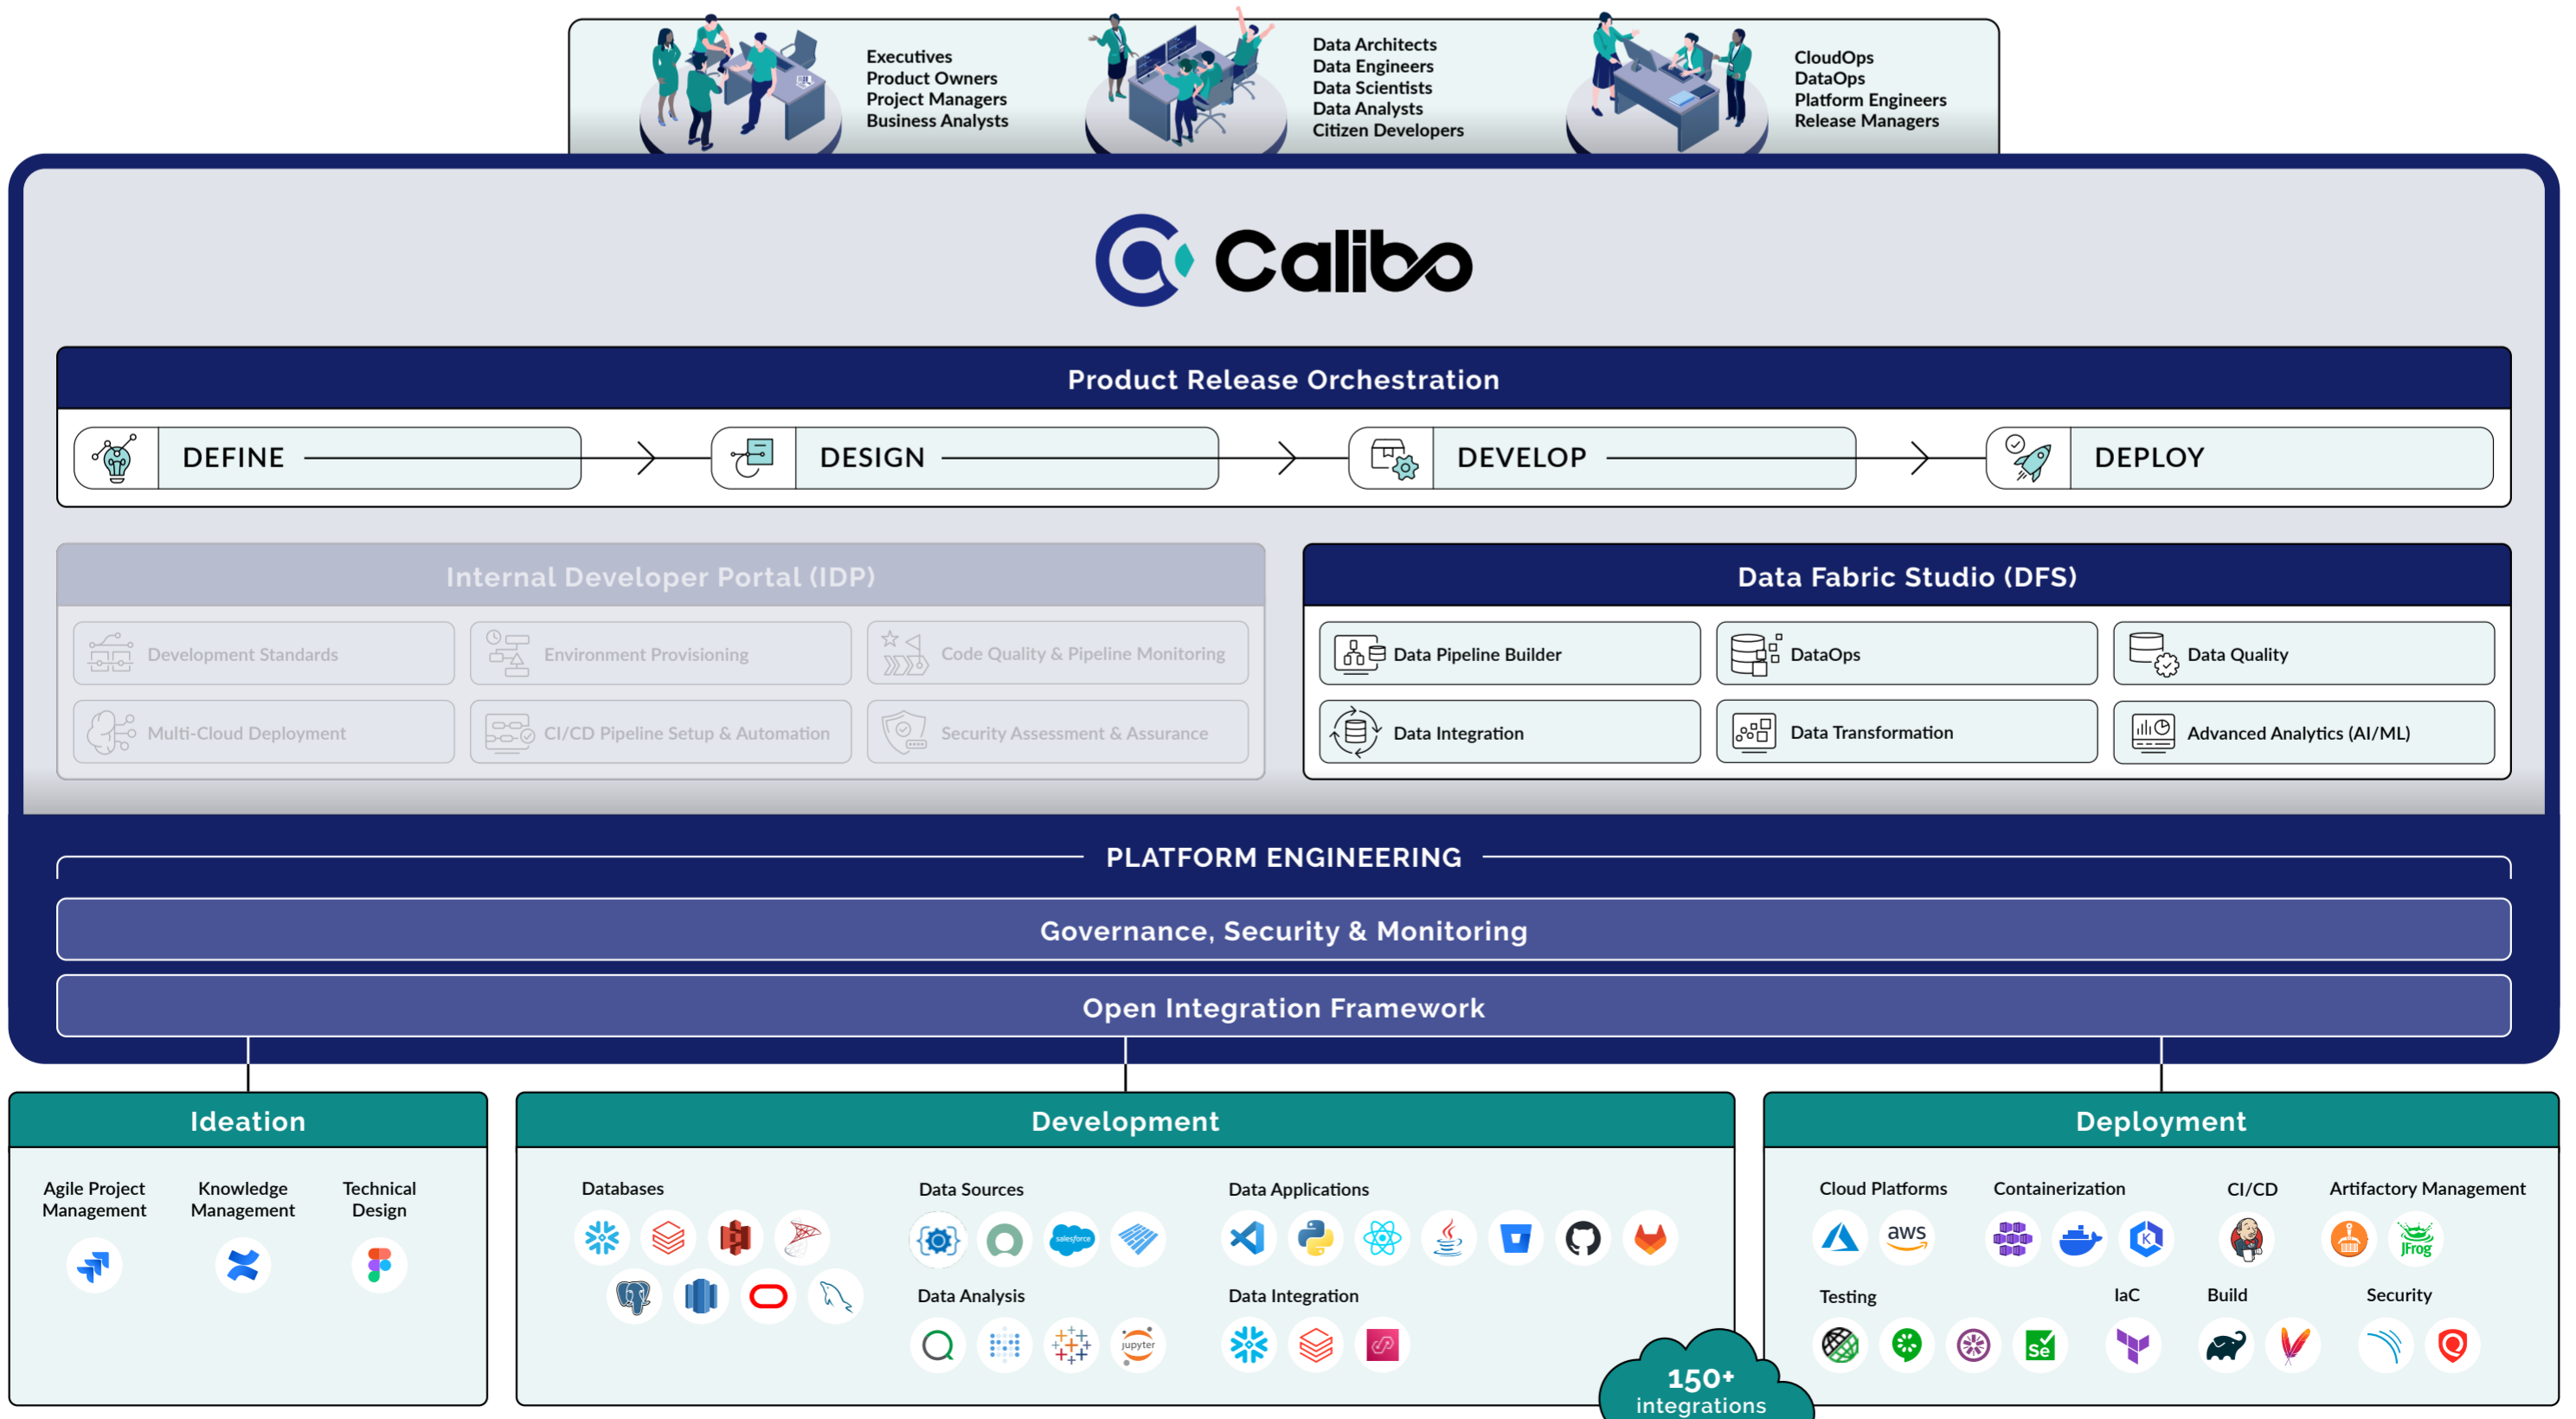

## Are you tired of...

- Waiting to get access to the infrastructure and data sources you need to start developing?
- Doing repetitive work in every new data project?
- Trying to keep the overview in a messy data landscape?
- Struggling to keep data accurate and consistent?

## With Calibo you can...

- Safely self-provision the environment you need
- Get started with data development work within minutes
- Develop, test and deploy data pipelines in half the time
- Apply data quality best practices easily with built-in features
- Manage all your data pipelines in one central platform

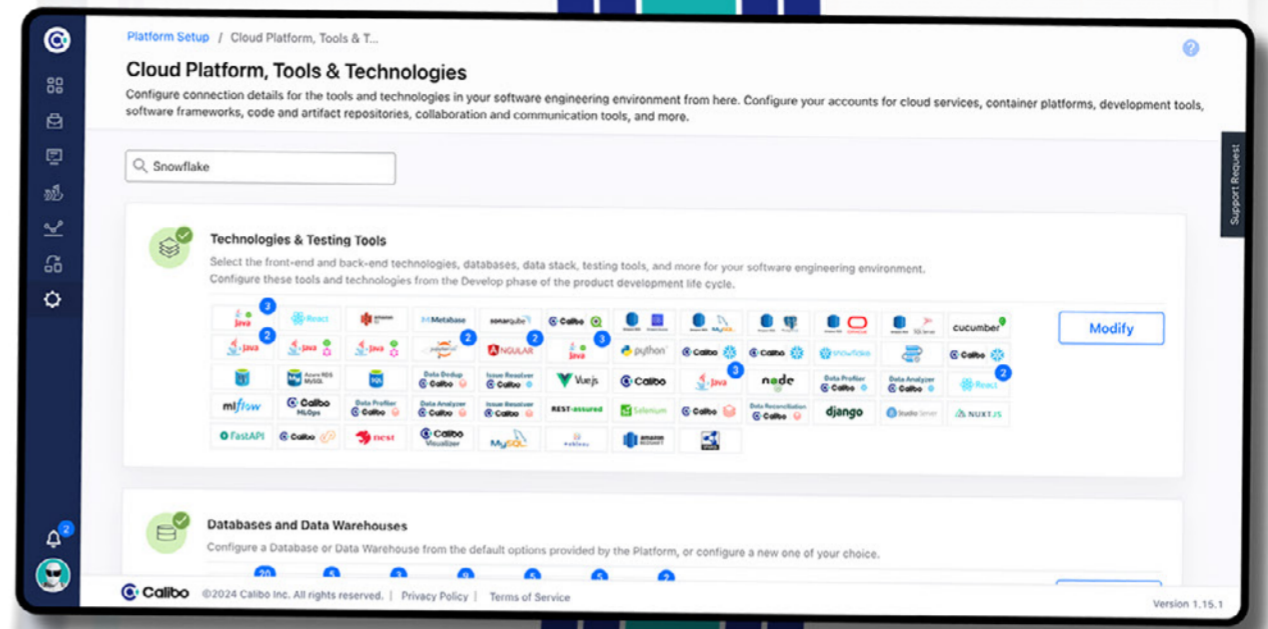

Our **Data Fabric Studio** enhances your modern data stack with top-tier orchestration and release features. It empowers data engineers, scientists, citizen developers, and business users to speed up data product development as never before.

# How to get started - platform highlights

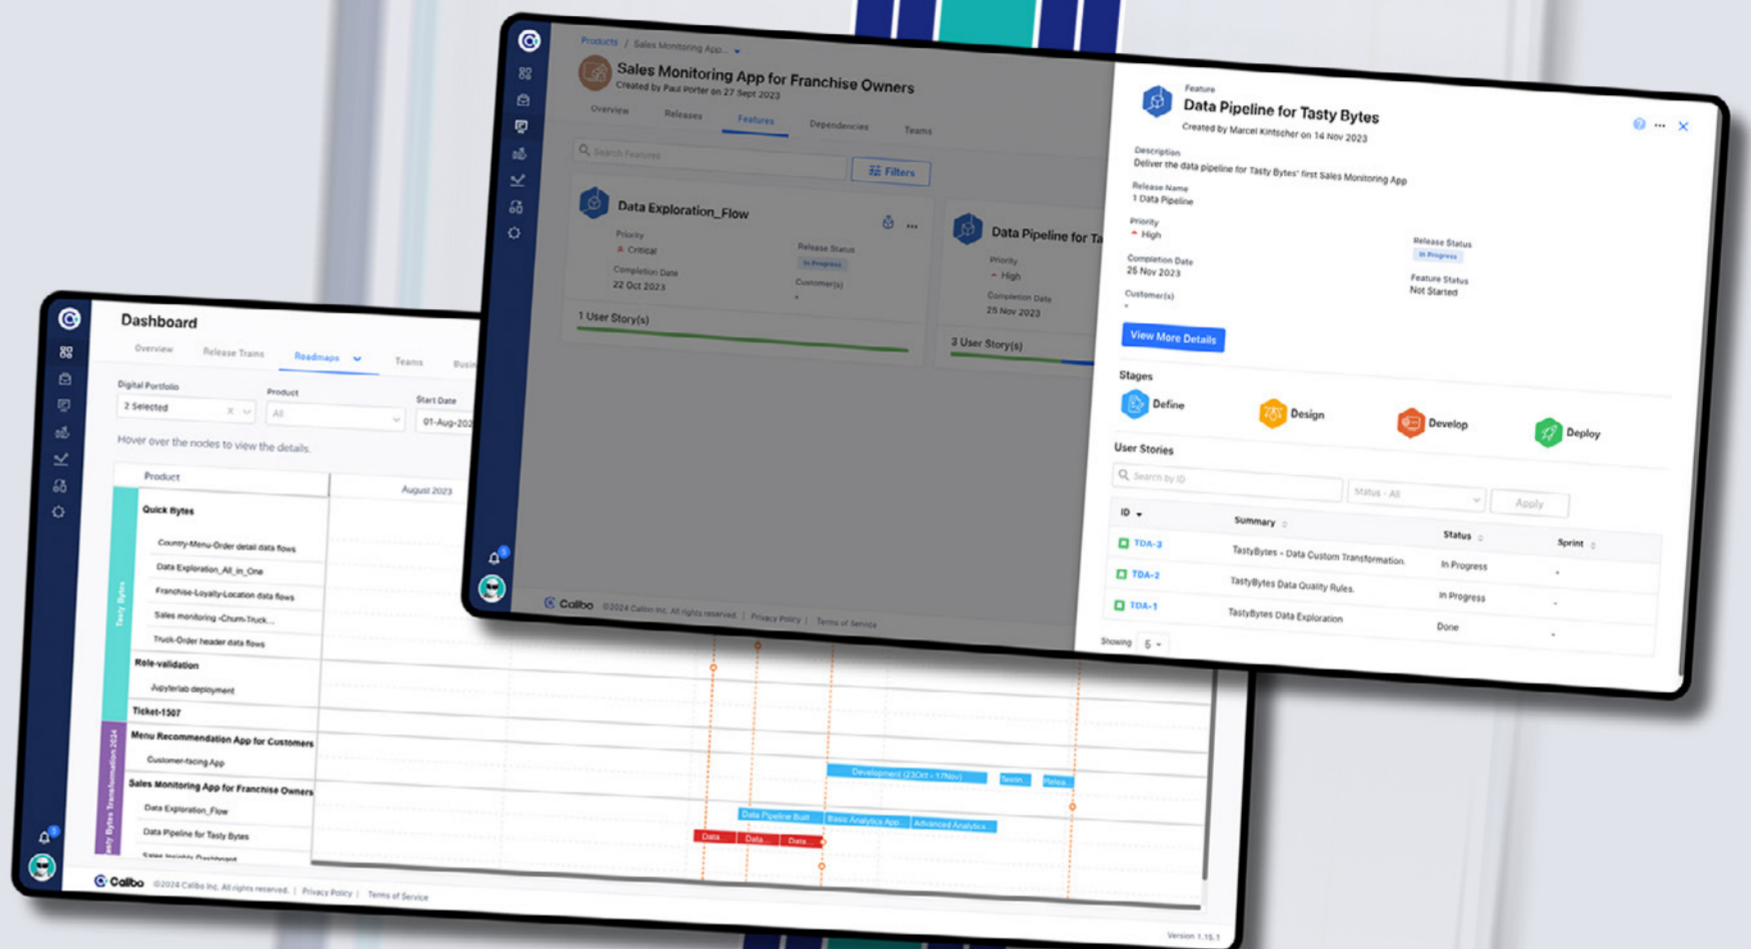

## 1 Platform setup, standard infrastructure & templates

- Onboard users from Active Directory
- Create and assign roles and teams for permissions and access
- Integrate your standard tech stack
- Set up agile project configurations
- Define development policies

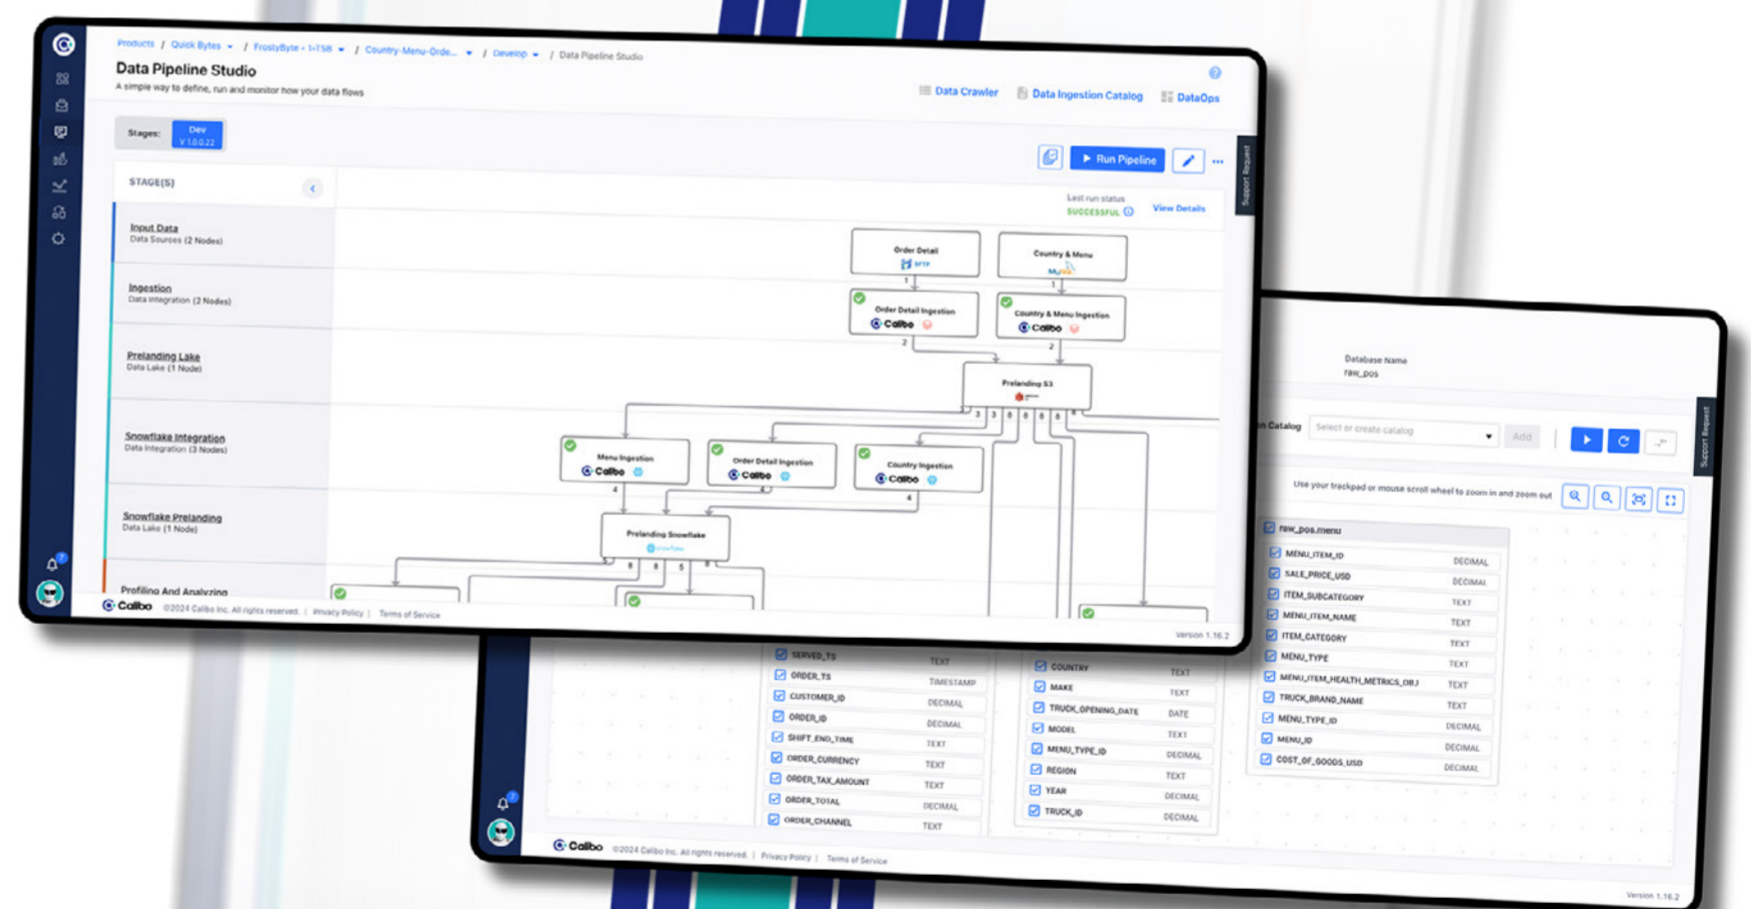

## 2 & 3 Agile product management & release orchestration

- Create product portfolios with strategy, business value and priority
- Create products and features and link with your agile planning tool
- Manage product releases and dependencies centrally
- Track status of all projects by portfolio in centrally accessible dashboards

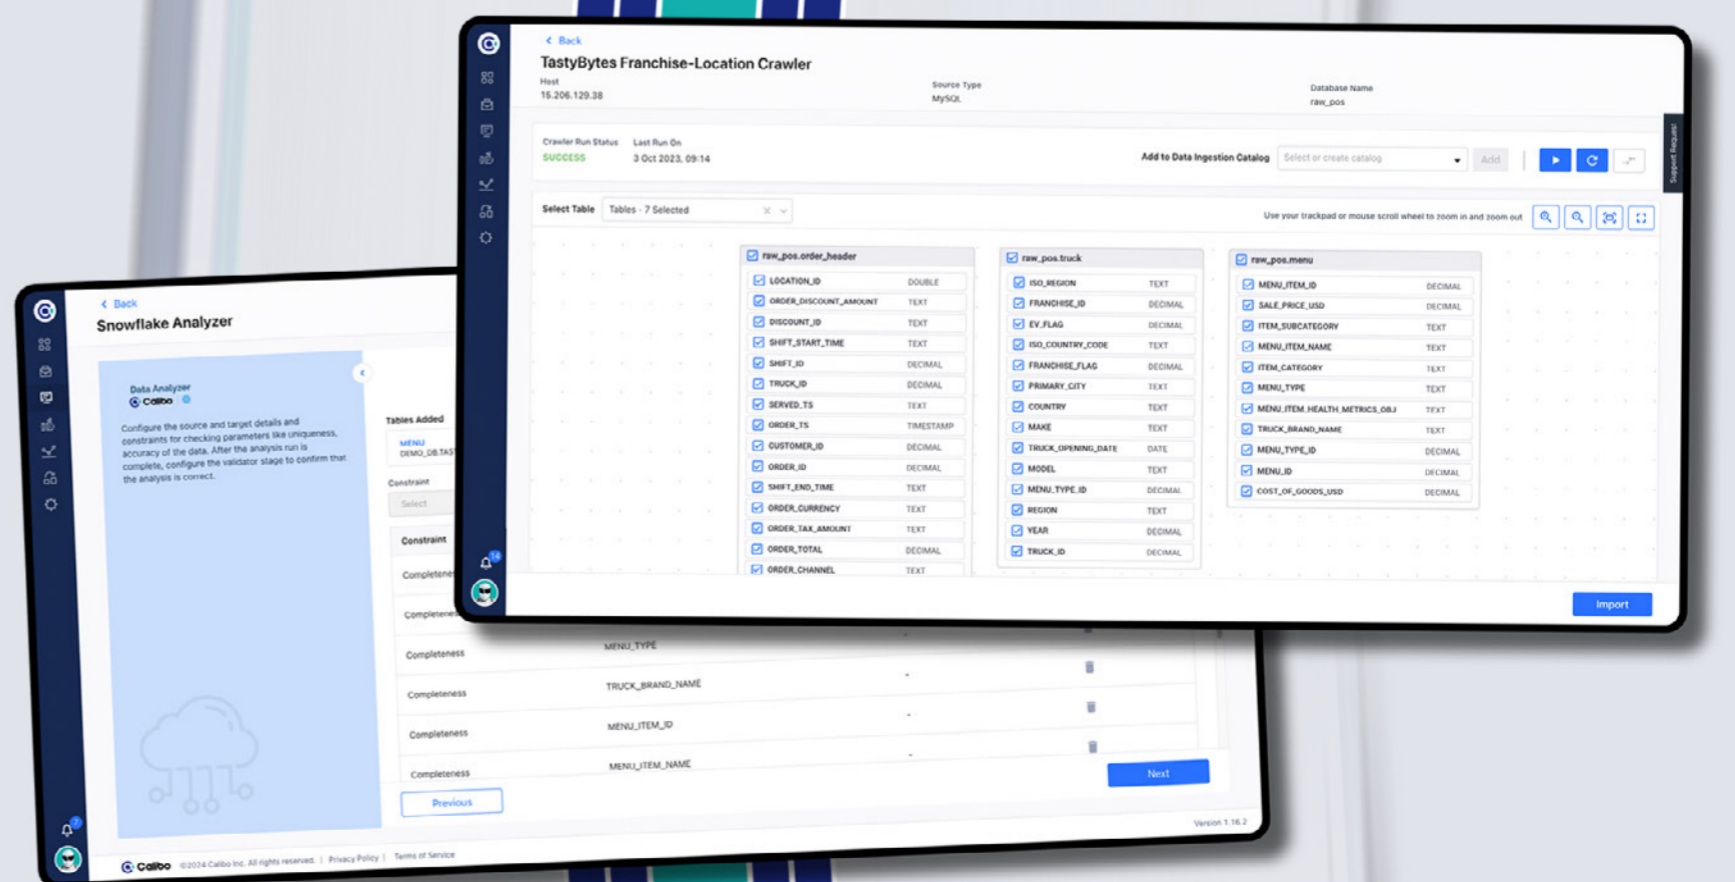

## 4 Data integration

- Leverage out-of-the-box connectors or custom data crawlers
- Simplify data integration with ingestion catalogues
- Build streaming or bulk ingestion pipelines
- Seamlessly integrate with your data lake and integration technologies

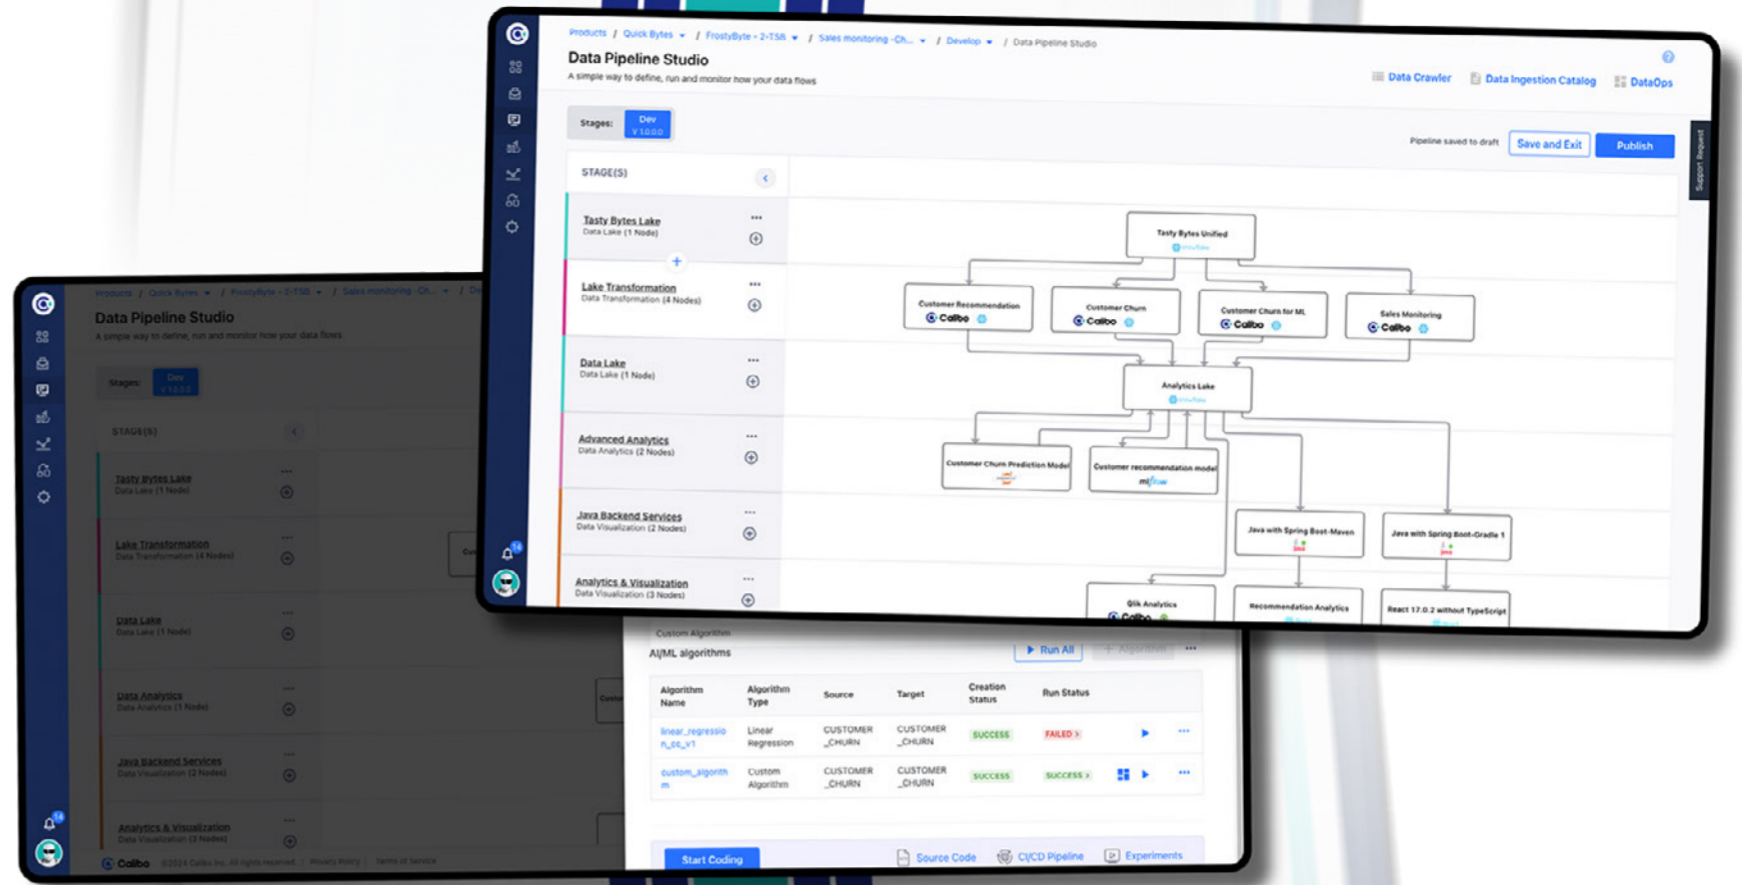

## 5 Data transformation & quality assurance

- Accelerate pipeline development with self-managed templates
- Streamline data quality assurance with built-in best-practice quality features
- Utilize out-of-the-box transformation tools or apply custom SQL

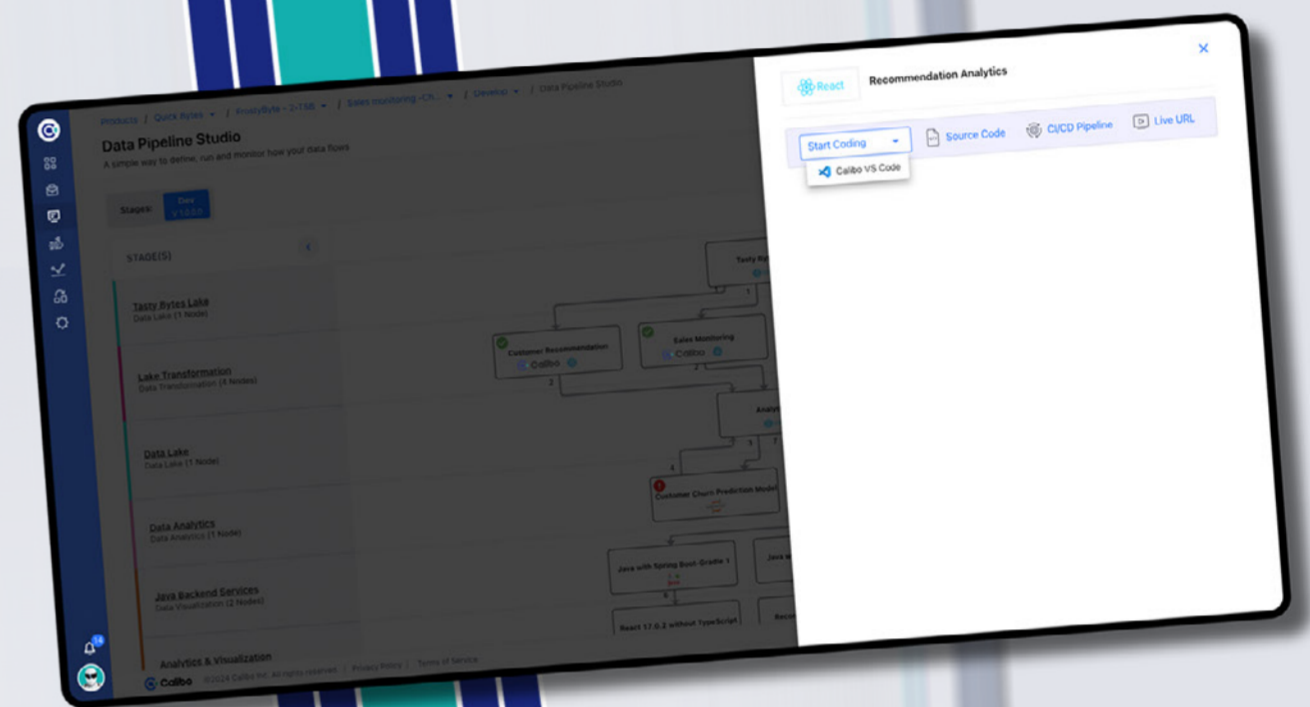

## 6a Advanced analytics (AI/ML)

- Accelerate advanced modeling with out-of-the-box ML templates
- Simplify testing with smart experimentation features leveraging your preferred ML technologies
- Reduce time-to-market through self-service deployment capabilities

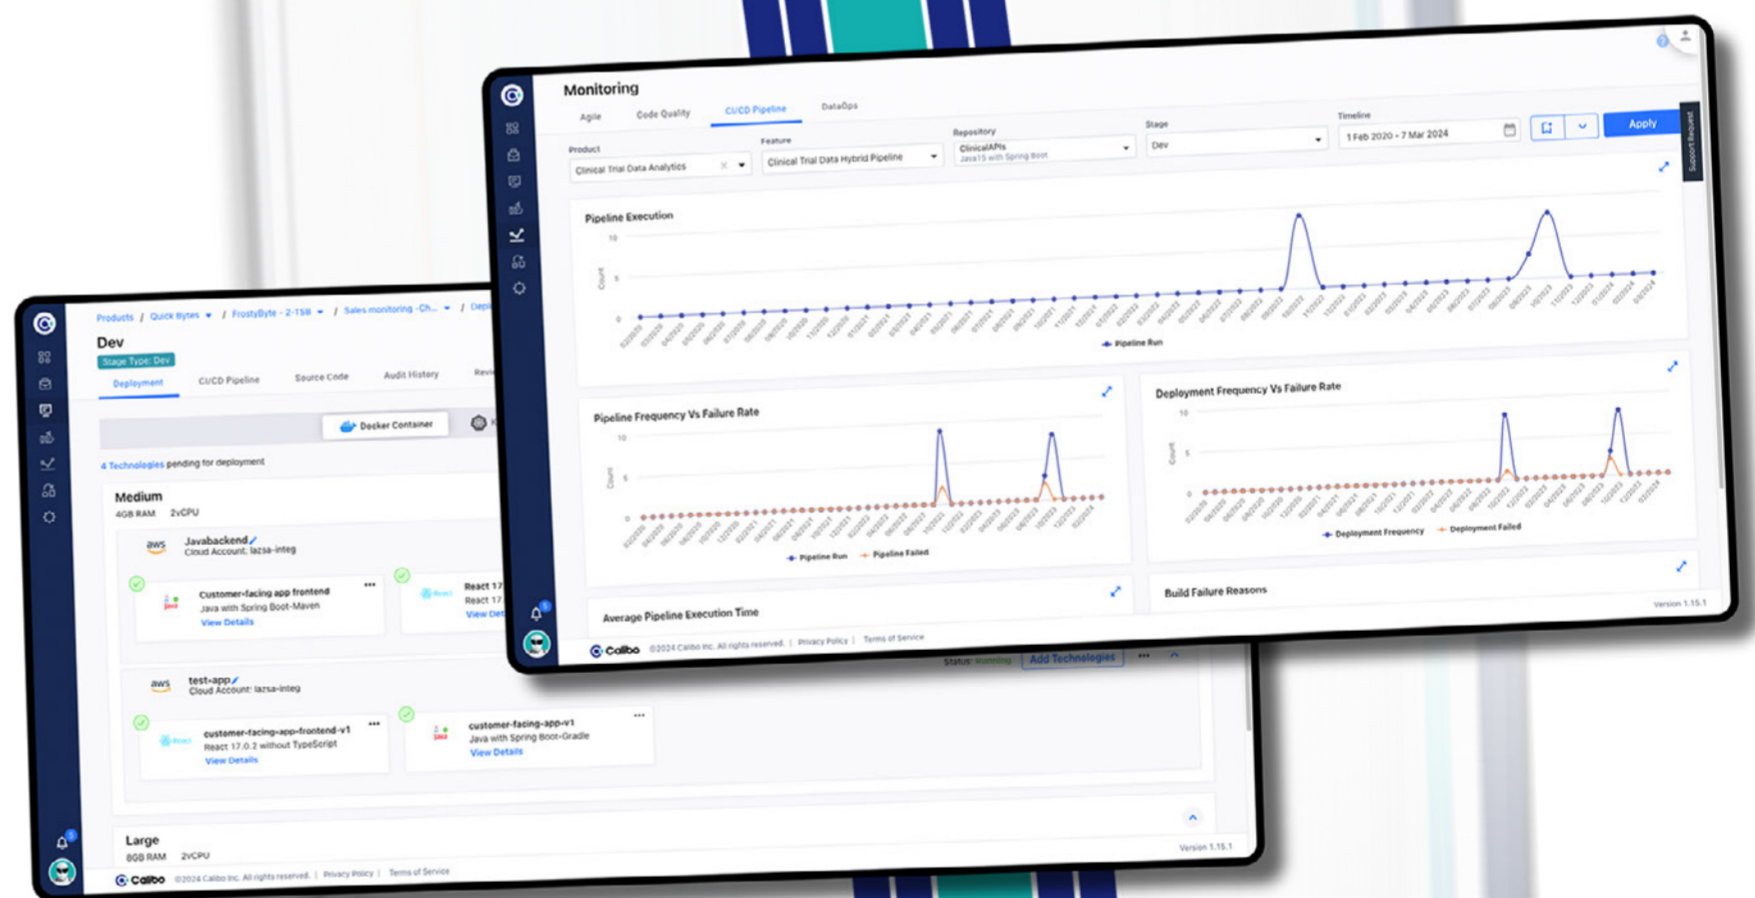

## 6b Data visualizations & applications

- Connect curated data assets to your preferred BI tools
- Develop and deploy custom data applications using the Integrated Developer Portal
- Make data easily accessible and consumable across the organization

## 7 Deployment, monitoring & maintenance

- Automate deployment into your underlying tech stack
- Automate data pipeline execution with custom scheduling and notification features
- Monitor pipelines in DataOps-focused dashboards
- Analyze complex data pipelines easily with the data lineage feature

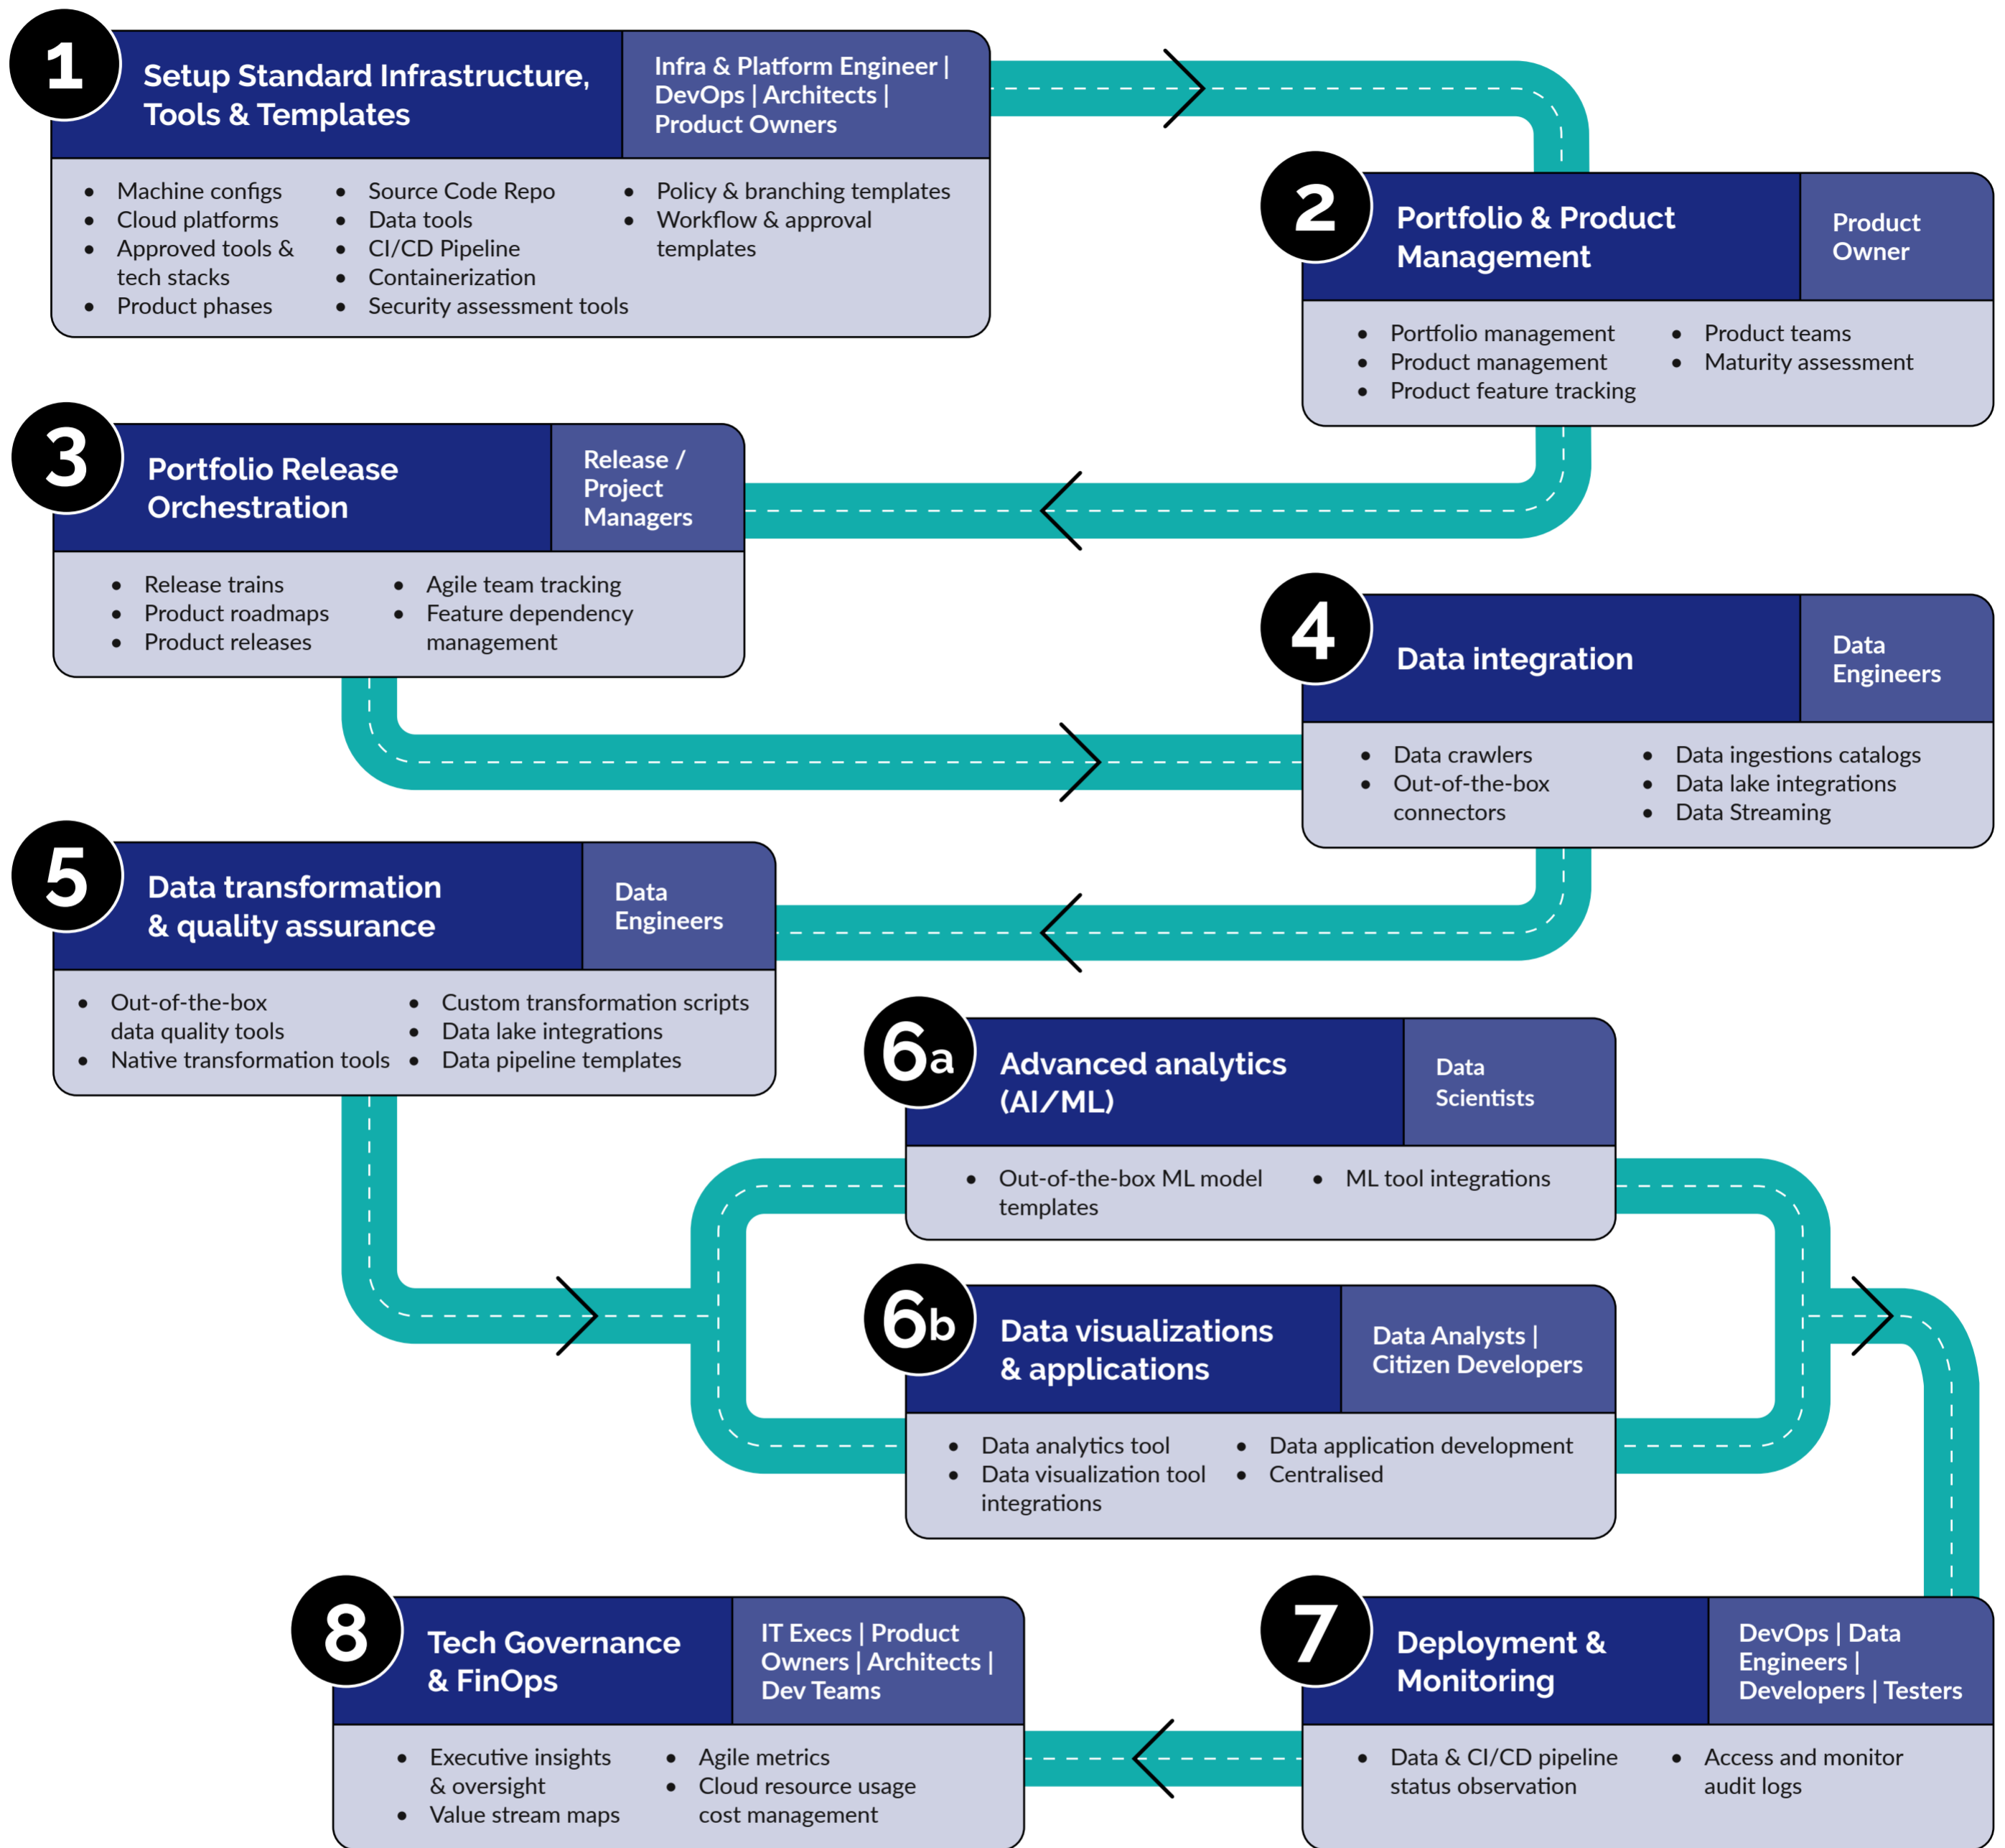

## 8 Tech governance & FinOps

- Centralized access to executive dashboard and insights for governance
- Value stream and traceability maps provide insights into product release pipeline bottlenecks
- Monitor and access business and product requirements, source-code & security audit logs centrally
- Track and manage cloud resource utilization costs

# One platform for all your stakeholders across the entire digital value creation

## Benefits

90% faster developer onboarding and environment provisioning

50% reduced time-to-market for new data assets and apps

Up to 80% time saving potential for data engineers and scientists

Improved data quality and consistency across your data fabric

Enhanced self-service developer experience, less fluctuation

Simplified data governance and compliance through out-of-the-box tools
