Calibo

Internal Developer Portal (IDP)

Launch products up to 50% faster. Standardize, eliminate silos, automate and accelerate application delivery.
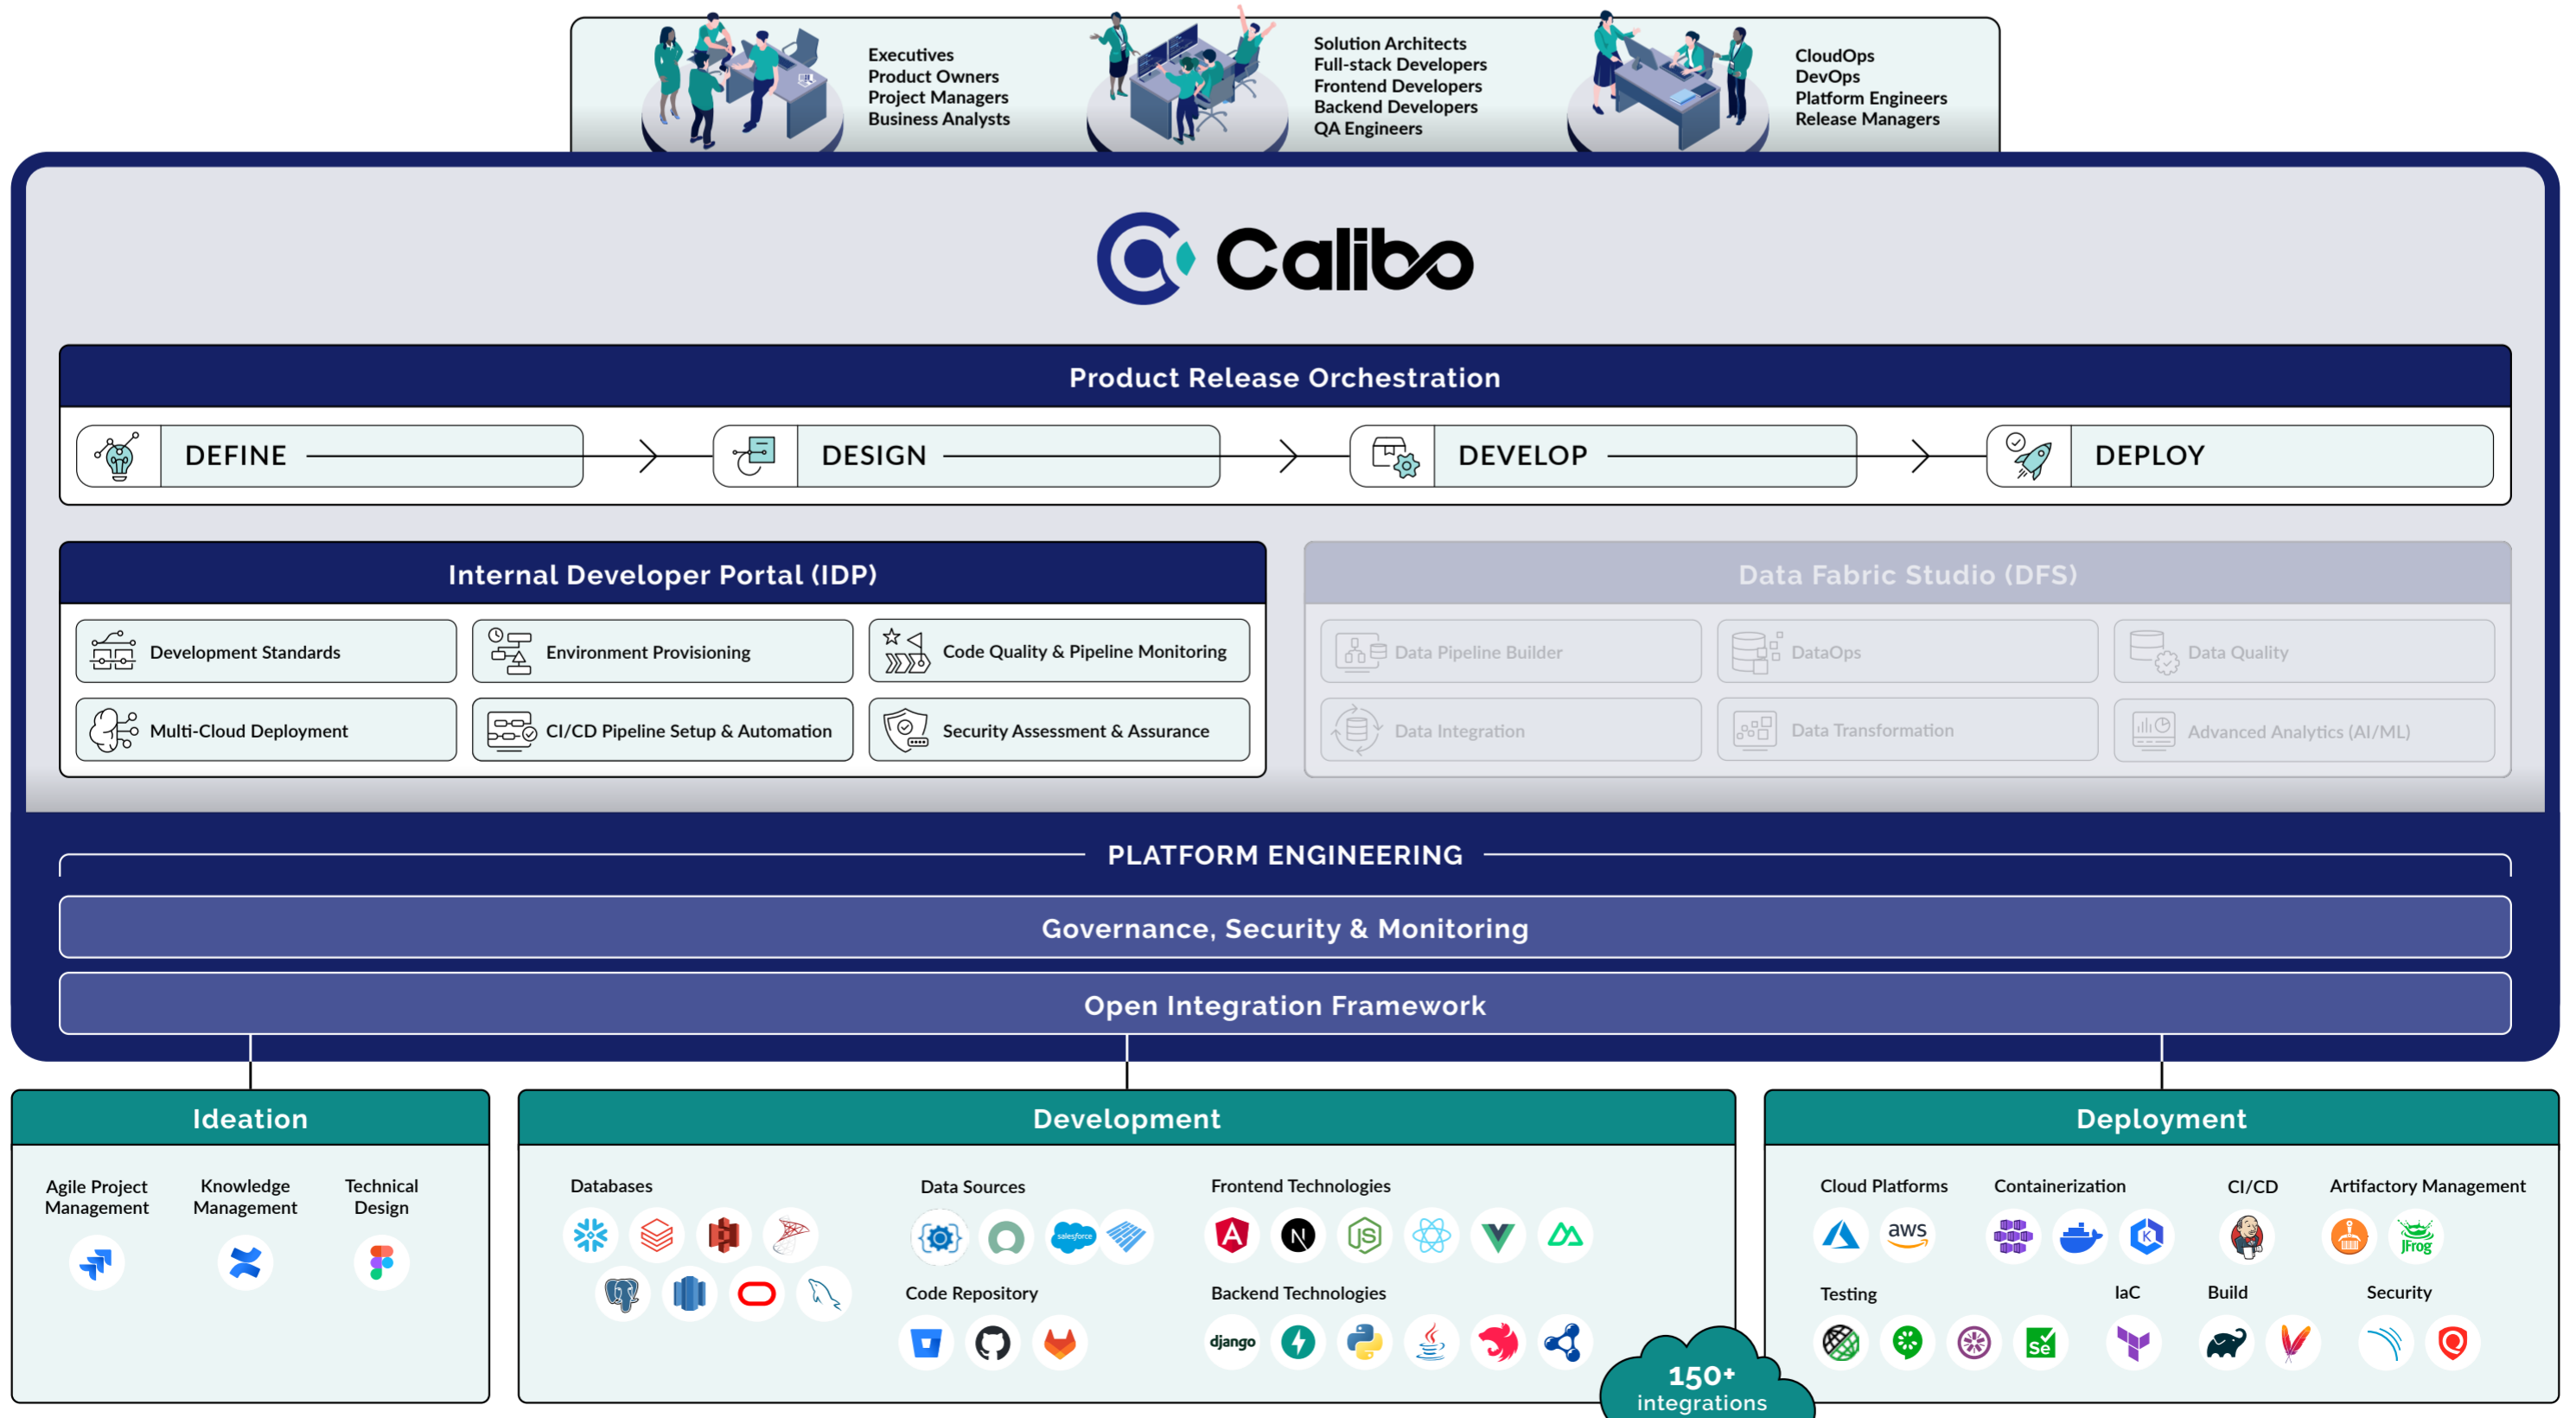

Do you find yourself...

- Constantly waiting on infrastructure teams to provision environments?
- Losing control of your vast number of fragmented toolchain and security policies?
- Often adapting your DevOps scripts and setup to changing standards and toolsets?
- Unable to keep track of your virtual project teams centrally?

With Calibo...

- Project teams perform self-service environment provisioning using pre-defined templates.
- Policy templates govern approved toolchain with security checks automated across entire tech stack.
- Auto-generate source code repos and CI/CD pipelines.
- Centrally manage virtual teams and product release progress.

Calibo's Internal Developer Portal integrates with 150+ best-of-breed technology stacks and enriches it with template-enabled automation, orchestration and product release capabilities to accelerate product delivery.

Executives
Product Owners
Project Managers
Business Analysts

Solution Architects
Full-stack Developers
Frontend Developers
Backend Developers
QA Engineers

CloudOps
DevOps
Platform Engineers
Release Managers

Calibo

Product Release Orchestration

DEFINE → DESIGN → DEVELOP → DEPLOY

Internal Developer Portal (IDP)

- Development Standards
- Environment Provisioning
- Code Quality & Pipeline Monitoring
- Multi-Cloud Deployment
- CI/CD Pipeline Setup & Automation
- Security Assessment & Assurance

Data Fabric Studio (DFS)

- Data Pipeline Builder
- DataOps
- Data Quality
- Data Integration
- Data Transformation
- Advanced Analytics (AI/ML)

150+ integrations

# How to get started - platform highlights

1 Platform setup, standard infrastructure & templates

- Onboard users from Active Directory
- Create and assign roles and teams for permissions and access
- Integrate your standard tech stack
- Set up agile project configurations
- Define development policies

2 & 3 Agile product management & release orchestration

- Create product portfolios with strategy, business value and priority
- Create products and features and link with your agile planning tool
- Manage product releases and dependencies centrally
- Track status of all projects by portfolio in centrally accessible dashboards

4a DevOps automation

- Provision cloud environment resources with just a few clicks
- Development toolchain setup and management
- Setup CI/CD, source-code, workflow and security policy templates
- Setup multi-cloud deployments
- Configure and manage monitoring schedules

4b App development

- Self-service development environment provisioning
- On-board new developers easily and quickly
- Standardize without impeding developer's freedom to innovate
- Centralized access to toolsets and environments
- Seamlessly integrate with agile & document management tools

5 Deployment, monitoring & maintenance

- Automate deployment based on your underlying tech stack
- Orchestrate containerized deployments with Kubernetes, Docker and more
- Monitor your deployment environments, CI/CD pipelines, and source-code repository statuses and updates
- Centralized access to traceability maps, monitoring dashboards, as well as detailed status, audit, and error log reports
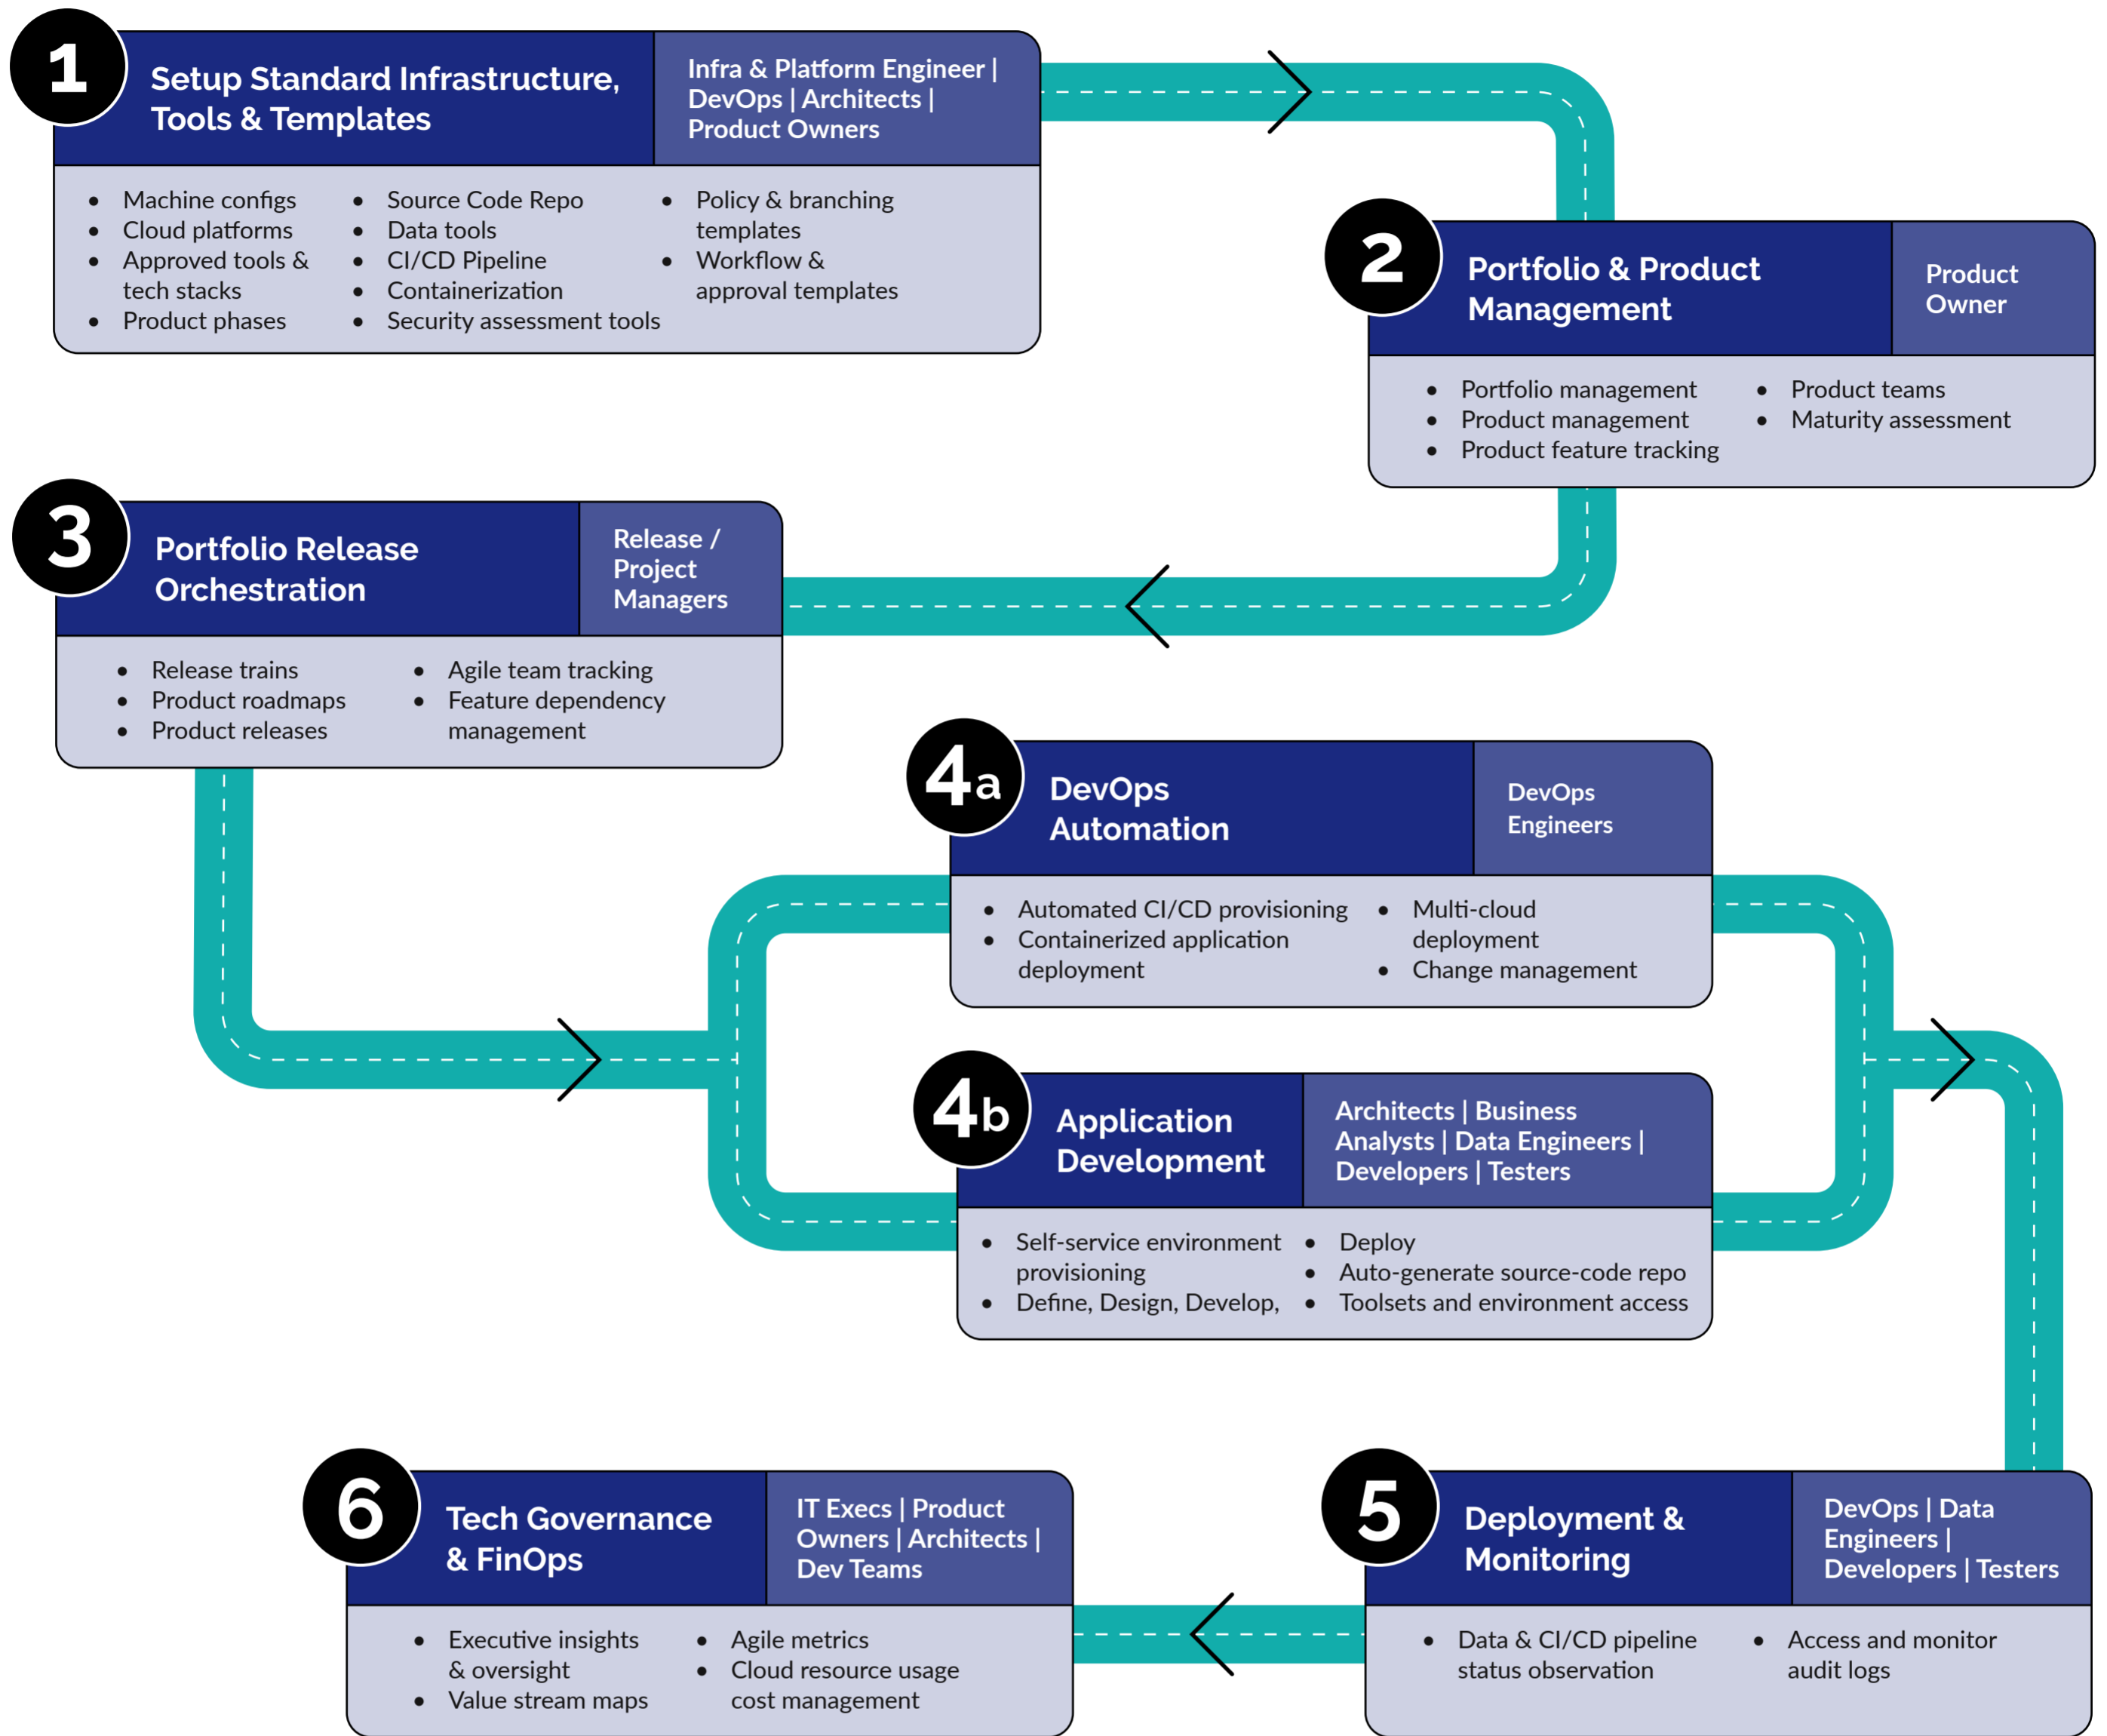

6 Tech governance & FinOps

- Centralized access to executive dashboard and insights for governance
- Value stream and traceability maps provide insights into product release pipeline bottlenecks
- Monitor and access business and product requirements, source-code & security audit logs centrally
- Track and manage cloud resource utilization costs

One platform for all your stakeholders across the entire digital value creation

1 **Setup Standard Infrastructure, Tools & Templates** | **Infra & Platform Engineer | DevOps | Architects | Product Owners**

- Machine configs
- Cloud platforms
- Approved tools & tech stacks
- Product phases
- Source Code Repo
- Data tools
- CI/CD Pipeline
- Containerization
- Security assessment tools
- Policy & branching templates
- Workflow & approval templates

2 **Portfolio & Product Management** | **Product Owner**

- Portfolio management
- Product management
- Product feature tracking
- Product teams
- Maturity assessment

3 **Portfolio Release Orchestration** | **Release / Project Managers**

- Release trains
- Product roadmaps
- Product releases
- Agile team tracking
- Feature dependency management

4a **DevOps Automation** | **DevOps Engineers**

- Automated CI/CD provisioning
- Containerized application deployment
- Multi-cloud deployment
- Change management

4b **Application Development** | **Architects | Business Analysts | Data Engineers | Developers | Testers**

- Self-service environment provisioning
- Define, Design, Develop,
- Deploy
- Auto-generate source-code repo
- Toolsets and environment access

5 **Deployment & Monitoring** | **DevOps | Data Engineers | Developers | Testers**

- Data & CI/CD pipeline status observation
- Access and monitor audit logs

6 **Tech Governance & FinOps** | **IT Execs | Product Owners | Architects | Dev Teams**

- Executive insights & oversight
- Value stream maps
- Agile metrics
- Cloud resource usage cost management

Benefits

40-60% DevOps time-saving compared with traditional approaches	30-40% developer productivity improvements	Improve Architecture and Security teams' productivity by 20-40%
Enforcement of best DevOps practices at organizational scale	Enhanced developer experience and self-service abilities	Improved security, governance, and compliance
